

CALLIER IS A “NO NUT” ZONE!

Please be aware that we have students with severe allergies to nuts.

Exposure to residue from nuts on hands, clothing, or any surface, or breathing small particles released in the air, may induce a reaction. **All staff and students are asked to avoid bringing, using, or eating nuts, peanuts, peanut butter, and other peanut or nut products at school.**

(In allergic reactions, the immune system releases chemicals that can cause symptoms like wheezing, nausea, headache, stomachache, itchy hives, and, in the most severe cases, anaphylaxis -- a sudden, severe reaction producing a drop in blood pressure, narrowing of airways, and swelling of the tongue. Anaphylaxis can cause serious breathing difficulty, loss of consciousness, and death.)
